

### **Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application. Claims 1-11 and 16 are currently pending, and Claims 12-15 and 17 are withdrawn from consideration pursuant to the previously made election. Please cancel Claims 1-11 and 16 as shown below, and please consider new Claims 18-28.

### **Listing of Claims**

1-11 (Cancelled)

12. (Withdrawn) A process to facilitate the review of a directory of one or more objects, the process comprising the steps of:

- a. generating a very brief descriptor of information related to each of the one or more objects of the directory; and
- b. generating a summary description of information related to selectable ones of the one or more objects, wherein said summary description may be in a uniform format for each of the one or more objects.

13. (Withdrawn) The process as claimed in **Claim 12** further comprising the step of enabling access via said summary description to a source of said summary description.

14. (Withdrawn) The process as claimed in **Claim 12** wherein said summary description is in the form of a mini home page.

15. (Withdrawn) The process as claimed in **Claim 14** further comprising the step of launching a plurality of said mini home pages while enabling viewing of the directory.

16. (Cancelled)

17. (Withdrawn) A system for automatically identifying a source of posting of information, the system comprising a tagging mechanism for automatically affiliating a source name and source access link with a posting upon posting of information.

18. (New) A distributed interactive content system to enable interactive content exchange, the system comprising:

a server configured to generate content associated with one or more fields of interest, the server further configured to enable reception and transmission of information related to one or more fields of interest, the server accessible by a plurality of users and a plurality of hosts; and

wherein the content is accessible and modifiable by the plurality users from any of the plurality hosts such that said content is substantially uniform for the plurality of users and the plurality of hosts.

19. (New) The system of claim 18 wherein the server includes a distributed network of computing devices.

20. (New) The system of claim 18 further comprising a unitary content database included in the server, the unitary content database adapted to receive, store, and organize information related to the one or more fields of interest.

21. (New) The system of claim 20 further comprising a plurality of subject databases organized within the unitary content database, the plurality of subject databases configured for the receipt, storage, and organization of information related to one or more of the one or more fields of interest.

22. (New) The system of claim 21 wherein the plurality of subject databases are supplied with the information related to the one or more fields of interest by the plurality of users.

23. (New) The system of claim 21 wherein the plurality of subject databases are supplied with the information related to the one or more fields of interest by the plurality of hosts.

24. (New) The system of claim 18 further comprising means for exchanging information between the server and the plurality of users via the plurality of hosts.

25. (New) The system of claim 18 wherein the server further includes a website and mini-page development system, wherein the website and mini-page development sub-system is configured to enable one or more of the plurality of users to view summary information of an object associated with a list, wherein the list is defined by one or more of the plurality of hosts.

26. (New) The system of claim 18 further comprising means to couple the server to the plurality of hosts, wherein said means to couple includes wireless interfaces.

27. (New) The system of claim 20 wherein the server is configured to manipulate, organize and store the information for retrieval by the plurality of users through the plurality of hosts such that the unitary content database can be queried for particular information to generate a unique database of content accessible by the plurality of users through the plurality of hosts.

28. (New) The system of claim 18 wherein portions of the content are storable in a distributed manner.
